PROFESSIONAL SUMMARY

Automation and integration specialist with 12+ years across IT operations, infrastructure, customer operations, and software delivery. I design solutions that connect business context to reliable execution using Python, APIs, n8n, data, and applied AI. I work from discovery and architecture through production implementation, with deliveries that reduced week-long processes to minutes, scaled high-volume operations, and replaced manual work with automated workflows.

PROFESSIONAL EXPERIENCE

Automation & Integration Specialist | Hi Platform Aug 2025 - Present

- Design solution architecture, backend services, production workflows, data pipelines, and enterprise integrations within RevOps.
- Built the backend and migration path for an internal analytics platform: 18 customers migrated, 6 added after migration, and 30+ customers use it today.
- Designed a Salesforce API and n8n workflow for 100+ monthly contract renewals, reducing a week-long batch to approximately 30 minutes.
- Created a Python, JSON, n8n, and React Flow pipeline used across 40+ bot flows; the largest cases moved from up to 30 days of manual mapping to about 8 hours.
- Delivered event-driven abandoned-cart recovery automation for enterprise customers and scaled transactional WhatsApp notifications to 50,000+ messages per month.
- Built approximately 35 internal APIs and data/AI workflows with PostgreSQL, Superset, OpenAI, Gemini, Meta, marketplaces, and WhatsApp, including summarization, sentiment analysis, and QA automation.

Customer Care Analyst | Hi Platform Sep 2021 - Jul 2025

- Supported enterprise customer operations and complex technical cases, translating operational pain into integration and automation opportunities.
- Developed deep product, customer, and process knowledge that became the discovery foundation for later solution-architecture work.

Founder & AI Automation Engineer | ProcessSurge 2025 - Present

- Build automation and e-commerce products for small and midsize businesses, from process discovery and architecture through implementation and support.
- Develop event-driven cart-recovery and support-automation workflows with explicit operational rules around LLM use.

EARLIER EXPERIENCE

IT Analyst | Grupo Semar Supermercados

Jun 2018 - Sep 2021

- Administered Bluesoft and Arius ERP operations for a retail chain with 30+ stores, supporting POS, self-checkout, workstations, and store connectivity.
- Introduced Jira-based service workflows and SLA visibility; designed store networks and built early automation scripts and API integrations.

IT Consultant & Systems Integrator | Gomes e Gomes Informatica

2015 - Jun 2018

- Delivered network, server, systems-installation, and infrastructure projects for small and midsize clients, owning the full engagement lifecycle.

IT Technician | Webcyber Informatica

2013 - 2015

- Provided hardware, software, and network diagnostics, configuration, preventive maintenance, and technical support for residential and business clients.

TECHNICAL STACK

Automation: n8n, event-driven workflows, webhooks, Celery, Redis, scheduling, process automation

Backend & APIs: Python, FastAPI, Flask, REST APIs, SQLAlchemy, JSON, middleware, authentication patterns

Data & analytics: PostgreSQL, SQL, ETL, relational modeling, Apache Superset, KPI dashboards, incremental ingestion

Applied AI: OpenAI API, Gemini API, structured LLM workflows, summarization, sentiment analysis, QA automation

Platforms: Salesforce, WhatsApp Business, Meta, Mercado Livre, Shopee, e-commerce and customer-support systems

Delivery: Docker, Linux, self-hosted services, production support, technical documentation, cross-functional discovery

EDUCATION

MBA in Artificial Intelligence and Big Data | Anhanguera University | Jun - Dec 2025

MBA in Software Quality Management | Anhanguera University | Dec 2024 - Jun 2025

Technology Degree in Information Technology Management | UNIP - Universidade Paulista | 2020 - 2023
