PROFESSIONAL SUMMARY

Automation, integration, and applied AI specialist with 12+ years across IT operations, infrastructure, customer operations, and software delivery. I design and implement production solutions with Python, APIs, n8n, LLMs, AWS/GCP, and data, working from discovery and architecture through operational monitoring and support. I also work at the governance layer, holding a seat on an AI committee that defines which AI technologies are adopted, where they are applied, under which usage and data policies, and at what cost. Experience includes event-driven automation, data pipelines, high-volume integrations, and generative AI with OpenAI and Gemini.

PROFESSIONAL EXPERIENCE

Automation & Integration Specialist | Hi Platform

Aug 2025 - Present

- Hold a seat on the AI Committee, helping define which AI technologies are adopted, where they are applied, under which usage and data policies, and at what cost, covering vendor and model evaluation, use-case prioritization, and cost and risk analysis.
- Map which operational processes are redesigned around AI, defining the target operating model and the capacity released in each area.
- Design solution architecture, backend services, event-driven automation, data pipelines, and enterprise integrations for production environments.
- Built the backend and migration path for an internal analytics platform: 18 customers migrated, 6 added after migration, and 30+ customers use it today.
- Designed a Salesforce API and n8n workflow for 100+ monthly contract renewals, reducing a week-long batch to approximately 30 minutes.
- Created a Python, JSON, n8n, and React Flow pipeline used across 40+ bot flows; the largest cases moved from up to 30 days of manual mapping to about 8 hours.
- Delivered event-driven abandoned-cart recovery automation for enterprise customers and scaled transactional WhatsApp notifications to 50,000+ messages per month.
- Built approximately 35 internal APIs and data/AI workflows with PostgreSQL, Superset, OpenAI, Gemini, Meta, marketplaces, and WhatsApp, including summarization, sentiment analysis, and QA automation.

Founder & AI Automation Engineer | ProcessSurge (concurrent)

2025 - Present

- Build automation and e-commerce products for small and midsize businesses, from process discovery and architecture through implementation and support.
- Develop event-driven cart-recovery and support automations, structuring context, prompts, and operational rules for reliable LLM use.

Customer Care Analyst | Hi Platform

Sep 2021 - Jul 2025

- Supported enterprise customer operations and complex technical cases, translating operational pain into integration and automation opportunities.
- Developed deep product, customer, and process knowledge that became the discovery foundation for later solution-architecture work.

EARLIER EXPERIENCE

IT Analyst | Grupo Semar Supermercados

Jun 2018 - Sep 2021

- Administered Bluesoft and Arius ERP operations for a retail chain with 30+ stores, supporting POS, self-checkout, workstations, and store connectivity.
- Introduced Jira-based service workflows and SLA visibility; designed store networks and built early automation scripts and API integrations.

IT Consultant & Systems Integrator | Gomes e Gomes Informatica

2015 - Jun 2018

- Delivered network, server, systems-installation, and infrastructure projects for small and midsize clients, owning the full engagement lifecycle.

- Provided hardware, software, and network diagnostics, configuration, preventive maintenance, and technical support for residential and business clients.

TECHNICAL STACK

AI governance: AI committee work, vendor and model evaluation, use-case prioritization, usage and data policies, cost and risk analysis, target operating model design

Automation: n8n, event-driven workflows, webhooks, Celery, Redis, scheduling, process automation

Backend & APIs: Python, FastAPI, Flask, REST APIs, SQLAlchemy, JSON, Git/GitHub, middleware, authentication (OAuth, JWT)

Applied AI: OpenAI API, Gemini API, generative AI, LLMs, prompt engineering, structured workflows, summarization, sentiment analysis, QA automation

Data & monitoring: PostgreSQL, BigQuery, SQL, ETL, relational modeling, Apache Superset, dashboards, operational monitoring, incremental ingestion

Cloud & Infrastructure: AWS (S3, OpenSearch), GCP (BigQuery, Google APIs), Docker, Linux, self-hosted services

Platforms: Salesforce, WhatsApp Business, Meta, Mercado Livre, Shopee, e-commerce and customer-support systems

Delivery: production support, technical documentation, discovery, and solution design with business teams

EDUCATION

MBA in Artificial Intelligence and Big Data | Anhanguera University | Jun - Dec 2025

MBA in Software Quality Management | Anhanguera University | Dec 2024 - Jun 2025

Technology Degree in Information Technology Management | UNIP - Universidade Paulista | 2020 - 2023

LANGUAGES & CERTIFICATIONS

Portuguese: Native | English: Upper-intermediate (B2), technical English daily | Spanish: Basic

Customer Care and Expectation Management (Hi Academy) | LGPD / GDPR - data protection compliance | ICT - Information and Communication Technology (SENAI)
